27 de Janeiro de 2016

### Script

```
$ wget --output-document=setup.sh link
$ source setup.sh myproject
```

### Objetivo

- Criar a view mais simples do mundo
- Criar um cadastro de pessoas
- Editar os dados pelo Admin

Segundo Django Brasil,

Django é um framework web de alto nível escrito em Python que estimula o desenvolvimento rápido e limpo.

adota o padrão MTV

- adota o padrão MTV
- possui ORM

- adota o padrão MTV
- possui ORM
- admin

- adota o padrão MTV
- possui ORM
- admin
- herança de templates e modelos

- adota o padrão MTV
- possui ORM
- admin
- herança de templates e modelos
- open source

Versão atual (Jan/16)

Django==1.9.1

### Instalação

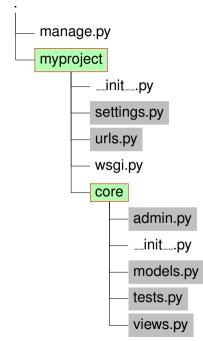

```
$ virtualenv -p python3 .venv
$ source .venv/bin/activate
$ pip install django
```

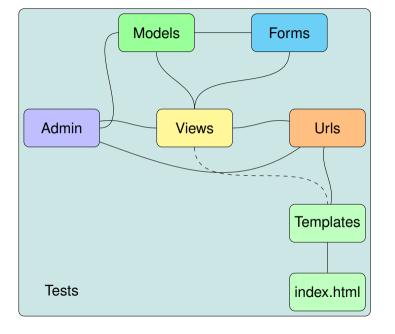

### Criando o Projeto

\$ django-admin.py startproject myproject .

### Criando a App

\$ python manage.py startapp core

Settings

### Django funcionando em nível 0

### Criando a primeira migração

\$ python manage.py migrate

### Django funcionando em nível 0

#### Criando a primeira migração

\$ python manage.py migrate

#### Rodando o projeto

\$ python manage.py runserver

#### Por padrão ele está rodando na porta 8000

http://localhost:8000/ **ou** http://127.0.0.1:8000/

### Django funcionando em nível 0

#### Criando a primeira migração

```
$ python manage.py migrate
```

#### Rodando o projeto

```
$ python manage.py runserver
```

#### Por padrão ele está rodando na porta 8000

```
http://localhost:8000/ ou http://127.0.0.1:8000/ ou

$ python manage.py runserver <PORTA>
$ python manage.py runserver 8080
http://localhost:8080/
```

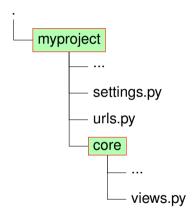

#### It worked!

Congratulations on your first Django-powered page.

Of course, you haven't actually done any work yet. Next, start your first app by running python manage.py startapp [app\_label].

You're seeing this message because you have DEBUG = True in your Django settings file and you haven't configured any URLs. Get to work!

### O mínimo - nível 1: settings, views, urls

### Editando settings.py

```
INSTALLED_APPS = (

'myproject.core',

'myproject.core',

'myproject.core',
```

### A view mais simples do mundo

### Editando urls.py

```
from django.conf.urls import url
import myproject.core.views as v

urlpatterns = [
    url(r'^$', v.home),
  ]
```

## Django

Bem vindo ao Grupy-SP

#### Tocando o barco

#### Editando settings.py

```
LANGUAGE_CODE = 'pt-br'

TIME_ZONE = 'America/Sao_Paulo'
```

### Editando views.py

```
from django.shortcuts import render
from django.http import HttpResponse

# def home(request):
from django.http import HttpResponse

# def home(request):
from django.http import render

# def home(request):
from django.http import HttpResponse

# def home(request):
from django.http import HttpResponse

# return HttpResponse

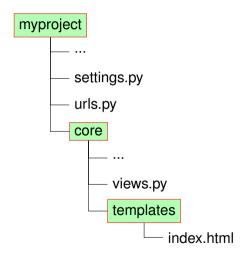

# return render(request, 'index.html')
```

### Editando urls.py

```
from django.conf.urls import url
import myproject.core.views as v
from django.contrib import admin

urlpatterns = [
    url(r'^$', v.home),
    url(r'^index/$', v.index),
    url(r'^admin/', admin.site.urls),
]
```

### A pasta templates

# **Tutorial Django**

Bem vindo ao Grupy-SP

#### Editando models.pv from django.db import models 2 class Person(models.Model): 3 first name = models.CharField('nome', max length=50) 4 last name = models.CharField('sobrenome', max length=50) 5 phone = models.CharField('telefone', max length=20, blank=Tru 6 email = models.EmailField('e-mail', blank=True) 7 blocked = models.BooleanField('bloqueado', default=False) 8 created = models.DateTimeField('criado em', auto now add=True 9 class Meta:

```
10
11
            ordering = ['first name']
12
            verbose name = 'pessoa'
13
            verbose_name_plural = 'pessoas'
14
```

15 def str (self): 16

17

return ' '.join(self.first name, self.last name) 25/36

### Tipos de campos

https://docs.djangoproject.com/en/1.9/ref/models/fields/

### Editando o admins.py

```
from django.contrib import admin
from myproject.core.models import Person

admin.site.register(Person)
```

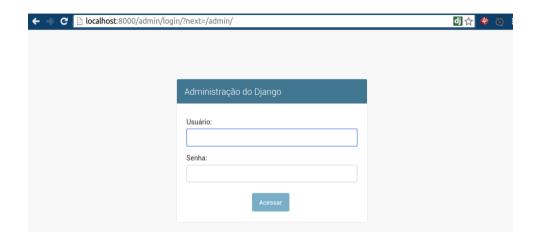

### Editando o admins.py

```
from django.contrib import admin
  from myproject.core.models import Person
2
3
  class PersonModelAdmin (admin. ModelAdmin):
       list_display = ('__str__', 'phone', 'email',
5
                        'blocked', 'created')
6
       search fields = ('first name', 'last name', 'phone', 'email')
7
       list filter = ('blocked',)
8
9
  admin.site.register(Person, PersonModelAdmin)
10
```

#### Atualizando o banco

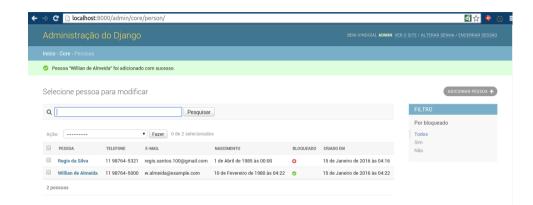

- \$ python manage.py makemigrations
- \$ python manage.py migrate

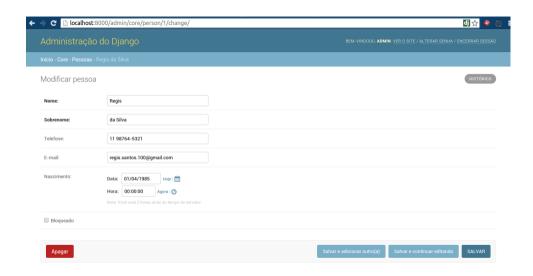

### Criando um super usuário

## Obrigado!

Dúvidas?
